

Daniele Frisanco

Mezzolombardo(Tn) Italy
Born in Trento, Italy on 16/07/1989

Work

January 2026 – ongoing

Full-stack Developer & DevSecOps Engineer

Mobile: +393200185358 Website: danielefrisanco.github.io E-mail: daniele.frisanco@gmail.com
VAT 02664090228

INICS Information Consulting & Solutions Ltd, Senior Backend & Infrastructure Engineer
inics.de.puit.is

- Leading architecture and delivery of a distributed FastAPI microservices platform for open-source digital media provenance tracking.
- Building secure CI/CD: GitOps pipelines with SBOM generation, container vulnerability scanning, and multi-platform builds, deployed to Kubernetes via ArgoCD and Helm.
- Hardening production infrastructure — HashiCorp Vault HA (Raft) for secrets, Keycloak for identity, multi-zone Kubernetes with stateful failover (Redis Sentinel), automated backups, and Terraform-provisioned autoscaling.
- Building the Terraform and Ansible infrastructure for a self-hosted, OAuth-secured MCP knowledge server that indexes a private document vault into Postgres/pgvector and serves it to multiple AI agents as shared persistent memory, with per-client write fencing, automated git sync, restic backups with tested restore, and failure alerting.
- Designing async watermarking and verification workflows with Temporal, with end-to-end observability via OpenTelemetry, Apache SkyWalking, and Jaeger.
- Building a Bitcoin timestamping service for on-chain document notarization using Merkle tree batching and OpenTimestamps to anchor provenance proofs to the blockchain.
- Designing and prototyping a decentralized network layer for provider-governed media provenance: on-chain membership governance via Solidity smart contracts (ERC-20 soulbound token + OZ Governor + Timelock), peer-to-peer data replication with OrbitDB/libp2p, and end-to-end key management for encrypted inter-node messaging.

Python, FastAPI, Keycloak, Temporal, Apache SkyWalking, OpenTelemetry, Jaeger, Dapr, PostgreSQL (pgvector), Redis Sentinel, Nginx, Docker, Kubernetes, Helm, ArgoCD, GitHub Actions CI/CD, Scaleway S3, HashiCorp Vault, Terraform, dbmate, gRPC, Bitcoin Core, OpenTimestamps, Merkle trees, Solidity, Foundry, Viem, OrbitDB, libp2p, IPFS, Ethereum/EVM, Smart Contracts, Claude Code, Ansible, Terraform, Ollama

November 2025 – December 2025

AI.Anima srl in Milan, Freelance Full Stack Developer
ai-anima.ai

- **Responsive corporate website** using **Nuxt.js 3**, **Vue 3**, and **TypeScript (SSR)**.
- Architecting a **RESTful API** with **FastAPI**, **PostgreSQL**, **JWT AU** and **Redis**.
- Containerization of the entire application stack using **Docker Compose** and automated CI/CD deployment to **Scaleway** using **GitHub Actions**.
- Delivery of a complete **end-to-end solution** with support for **internationalization (i18n)**, **form validation**, **data persistence** in the database, **CSRF** protection, **Nginx** reverse proxy with **SSL/TLS**, and **automated email workflows**.
- Implementation of security hardening with **Content Security Policy (CSP)**, **HSTS**, **secure cookies**, and **rate limiting**.
- Integration of **HeyGen LiveAvatar SDK** for real-time AI-powered digital human interactions.

Nuxt.js 3 SSR, Python 3, Docker, RESTful API, Claude Ai, HeyGen LiveAvatar SDK, GitHub Actions CI/CD

January 2024 – August 2025

Leanbit srl in Padova, Freelance Software Developer
leanbit.it

	Consultancy and full-stack development, supplier for <i>Binary System srl</i>: RoR, Node.js, Vue.js 3, Python, Vite.js • Multiple projects, with back-ends in both RoR 7 (Ruby on Rails 7) and Node.js. • Development of Python scripts and services for the bidirectional integration and synchronization of data with an external service via dedicated APIs using FastAPI. • Setup and development of a new Node.js back-end in parallel with the RoR system. • Migration from Vue 2 to Vue 3. • Creation of synchronous APIs for external clients using XML messages. • Implementation of SSO (Single Sign-On). • Development of a front-end composables library in Vue.js 3 and Tailwind 4, written in TypeScript. • Direct client communication/contact. Ruby on Rails, NodeJS, Vue.js, python3, API, postgresSQL, knex.js, docker, git, Google Gemini
February 2022 – December 2024	White Libra in Milan(IT) full remote part-time, Freelance Lead Developer Platform for sharing and manage work whitelibra.com • Design and implementation of a Python backend service to process user data and recommend a list of projects, followed by a subsequent re-design to leverage OpenAI APIs, implementing the recommendation logic via embeddings and LLM models. • Refactoring of the email and notification sending system. • Design and implementation of the budget management system. • Deployment and testing Ruby on Rails, JS, Vue.js, Python, DevOps, OpenAI API
July 2022 – December 2023	Binary System Srl in Piacenza full remote part-time, Freelance Software Developer Software platform for managing railways activities binarysystem.eu • Creation of new features interconnected between multiple services • Development and management of Python microservices dedicated to data processing and the dynamic generation of PDF documents for print output. • Maintenance and bug fixing back and front end (Ruby and Js, Node.js and Vue.js) Ruby on Rails, NodeJS, Vue.js, Python, ETL, postgresSQL, knex.js, docker, git, microservices
August 2021 – December 2021	MyLime in Cremona(IT) hybrid work, Freelance Software Developer Digital passport for goods on blockchain my-lime.com • API and security development • Added integration testing • Writing of code, API, and end-user documentation • Research and proof of concept for multisig smart contracts over Polygon blockchain Ruby, Ruby on Rails, Heroku, Solidity, PolygonMATIC
July 2018 – June 2021	Axini in Amsterdam(NL), Software Developer Model based testing axini.com • Worked on a proprietary domain specific language • Front and back-end development • Creation and testing of models on-site • Messaging protocols testing and implementation of message converters and adapters Ruby, Ruby on Rails, Coffeescript, DSL, git, docker
July 2015 – May 2018	ProctorExam in Amsterdam(NL), Full-stack Developer Safe online exams platform proctorexam.com • Reduced the transcoding time of videos of 5 times • Reduced the cost per minute of streaming with the creation of an in-house WebRtc server • Increased the test coverage by 50% • Created a new set of APIs • Mentored 4 interns Ruby, Ruby on Rails, ReactJs, RabbitMQ, psql, ffmpeg, Kurento, WebRTC, Node.js, mongoDB, AWS EC2 and S3 SDK, Google Cloud, Kubernetes, mentoring, pair programming, git
November 2015 – February 2016	Questomatica Escape Experiences in Amsterdam(NL), Software and electrical engineer Real life escape room questomatica.nl

- **Designed** the software for Arduino boards architecture for **controlling sensors**, lights and other electromechanical devices of an **escape room**, formatted and re-organized the existing code

February 2015 – June 2015

Plot Projects in Amsterdam(NL), Web developer

Location based marketing platform plotprojects.com

- Implemented a new design for the company's website and new features for the product dashboard

AngularJs, Wordpress, Scrum

August 2012 – December 2014

DynamicBusinessManagementSystem srl in Trento, Italy, Software developer, ERP and CRM advisor

Technology for administration processes dbms-it.com

- Consultancy over CRM
- I have developed new and personalized features, both front and back end, for ERP software.

T-sql, PowerBuilder, Javascript, Html

Education

September 2008 – March 2012

Bachelor degree in Computer Science

Trento University, faculty in Mathematic,Physic and Natural Science with a grade of 97 over 110

I speak Italian, English and basic Dutch
